

## CONNECTING YOU AND YOUR PATIENTS THROUGH TELEMONITORING

- Help manage your patients chronic heart failure condition.
- Patients use the interactive system each day in their homes to monitor their vital signs and symptoms.
- Takes only 2 minutes a day for patients to perform the health check.
- Daily health information is securely transmitted through a cellular network or a standard telephone line to the telemonitoring nurse.
- Detailed health data is analyzed by the Volunteer telehealth nurse. You will then be contacted if the patient requires a change in his/her medication or treatment plan.

how your patients can participate  
in the home telemonitoring  
program.

## HOW CAN HOME HEALTH TELEMONITORING BENEFIT PATIENTS?

- Helps give patients confidence and may improve their ability to stay independent in their home.
- Encourages patients to be active in their own health care by reinforcing positive behavior and compliance.
- Educates patients about their disease by giving key health messages related to their condition.
- Provides patients peace of mind knowing that their health status is being monitored every day.
- May improve patients' quality of life by promoting and encouraging self-management skills.

- Assists in keeping patients out of emergency rooms and hospitals.
